Collect evidence before you pitch

REPLAY LAB fieldwork kit • interview prompts, observation sheets and analysis rules

A small study with a clear scope

Study working adults aged 18 or older who buy, consider or decline Squishy/Slime. For this class project, a practical starting target is five to eight eligible interviews across at least two shops and observations at three shops. These are planning targets, not completed data or a claim of representativeness.

Keep two kinds of evidence separate

Before concept exposure	After concept exposure
Ask what happened: purchase recency, purpose, first trigger, reasons and childhood experience.	Show the same REPLAY LAB description to each participant, then ask for a reaction.
A recent self-use purchase may support the consumer trend.	Interest, a demo vote or a simulated pre-order is feedback; it is not a sale.
If they already saw the website, record prior exposure.	Do not treat exposed visitors as an unprimed comparison group.

Recruit without selecting only enthusiasts

Approach adult visitors at a consistent interval when practical, such as the next available visitor after each completed interview. Include non-buyers and people buying gifts. Record location, time, refusals and how people were approached. Do not infer work status from clothing, age appearance or a laptop.

Short consent script

“I am doing a class study about toy buying. May I ask a few questions? Taking part is optional, and you can skip a question or stop. I will use an anonymous summary. I do not need your name or contact details.”

Ask separately before quoting, recording or photographing: “May I use this short quote anonymously?” and “May I record or photograph you for the class video?” A yes to questions is not a yes to recording. If consent is declined, do not retain a research response.

Interview: ask, then listen

Screen

Are you 18 or older, and are you currently working? Use their answer; do not guess.

Actual behaviour

Have you bought Squishy or Slime? When was the most recent purchase? What did you buy, and who was it for?

First trigger

What first made you interested in that particular item? Let them answer before suggesting social media.

Reason for buying

What made it worth buying for you? What nearly stopped you?

Childhood link

Did you own, play with or want something like it when you were younger? What difference, if any, did that make?

Use and alternatives

Where do you actually use or keep it? What else could you have bought or done instead?

Non-buyer route

If you have not bought one, what keeps you from buying? Have you considered it, or does it not interest you?

Concept exposure

Read the standard REPLAY LAB concept only now. What seems useful, unnecessary or unclear? What would make you decline?

Pre-order conditions

What information would you need before paying for a product made only after enough people order? Ask about timing, prototypes, price and refunds after the open answer.

Do not say “This helps stress, right?” or “Would you buy this unique idea?” These phrases supply the answer. Use exact words for quotations and label translations accurately.

Store observation sheet

Duplicate for each shop. Keep unknown items blank or mark “not observed”. A visible transaction does not reveal buyer motive.

Field	Notes
Shop ID / location	
Date / start and end time / minutes observed	
Products and displayed price range	
Samples or trials offered? Describe	
Trial events counted / visible purchase events counted	
Exact shopper or staff statement, if permission given	
Photo / clip filenames and permission	
What I directly observed	
What I infer from that observation	
What this visit cannot establish	

Count events consistently. Do not turn “many shoppers” into an invented percentage. Stock displays establish availability; they do not establish adult demand or continued use.

Interview record sheet

Anonymous ID: _____ Date / location: _____
Adult confirmed: _____ Work status: _____
Consent: questions _____ anonymous quote _____ recording / photo _____

Field	Notes
Most recent purchase / date / purpose	_____
First trigger in their own words	_____
Reason for buying in their own words	_____
Childhood connection, if any	_____
Intended or actual use	_____
What would stop them buying	_____
Response after seeing REPLAY LAB	_____
Exact short quotation + translation note	_____
Researcher interpretation and limitations	_____

Contact details are not needed for this pack. If you later arrange follow-up, obtain separate permission and keep contact information out of the class report and public website.

Analyse what the sample can support

Keep the denominator visible

Measure	Who belongs in the denominator?
Recent purchase	All eligible, consenting respondents who answered purchase_recency.
Main purpose / first trigger	Eligible respondents with an actual purchase and a valid answer to that question. Separate recent purchases from older memories.
Reasons / valued features	Respondents answering that multi-select item. Counts can overlap and need not add to 100%.
Childhood connection	Eligible respondents answering childhood_experience. Owned and wanted are distinct categories.
Concept interest	Respondents who read the concept and answered the interest question. This is stated intention.
Hypothetical price	Respondents selecting a specific product and entering a number. Separate Squishy and Slime; keep zero; exclude blank/unsure from numeric summaries.
Usability	Respondents who actually tried the demo and answered the usability item. Report inability to finish.

Interpret cautiously

For a small convenience sample, use counts such as “3 of 6”, not population estimates. Report recruitment place and dates. One field visit cannot establish growth over time or prove that social media caused a purchase. A nostalgic answer does not prove a medical benefit.

Keep three outcomes distinct

Observed behaviour: an actual reported purchase or documented store event. Stated preference: a survey response about a hypothetical service. Demo interaction: a locally saved design, vote or simulated pre-order. Only real, consented data can be included as fieldwork; generated examples never count.

A useful slide replacement

“On [date], we spoke with [n] eligible working adults at [locations]. [x] had bought in the past three months; among those, [y] named [trigger]. One consenting respondent said [short exact quote]. This small local sample [supports / complicates] our interpretation.”

Data handling & codebook

The website is a local-export demo

The GitHub Pages survey does not send answers to a central database. A participant may export a response and choose to share it with the researcher. Only files actually received with consent are collected data. Keep original files privately, deduplicate by record ID and document any cleaning. Do not publish raw answers in the GitHub repository.

File / code	Meaning or rule
survey.json	Machine-readable instrument. Stable IDs, display conditions, screening stops, exclusive options and optional fields are defined here.
respondents_blank.csv	Header-only data sheet. One eligible consenting respondent per row. Do not enter dummy people.
observations_blank.csv	Header-only shop/event sheet. Each row represents one timed visit, not a person.
interviews_blank.csv	Header-only interview sheet. Preserve verbatim answers and interpretation in separate fields.
Blank value	Missing, skipped or not applicable. Do not convert to zero or “no”.
0 in max_price_thb	The respondent would not pay for the specified hypothetical item. This is a meaningful answer.
Checkbox values	Store the stable values as a JSON array inside the CSV cell. “none” and “not_sure” are exclusive where defined.
Prior concept exposure	Keep yes, no and not_sure separate. Website visitors may already have seen the proposal.
Termination	No consent, under 18, age not confirmed or not currently working ends this target survey. Do not export an eligible response.

No findings yet

This pack contains questions, blank sheets and analysis instructions. It does not contain completed observations, participant answers, measured willingness to pay or validation of the business.
